FAQ

Give a short description about your startup
For owners of German micro-cap companies (up to €5m enterprise value) who are looking for a successor but lack access to professional sell-side M&A advisory, nachfolge.live offers a highly automated end-to-end transaction process from marketplace listing, company valuation, data room guidance, and the preparation of an investment memorandum to AI-based matching with potential buyers and support through closing.

Why do you think you and your team can solve the above mentioned problem for your clients?
I bring exactly the combination of M&A, valuation, and business development experience that is relevant to building nachfolge.live. Among other things, I worked in Corporate Finance at BDO on mid-cap M&A transactions for banks and FinTechs, valued alternative investments at Deloitte, worked in a highly execution-oriented BizDev task force at Enpal, and currently focus on PMI topics for Private Equity at a tech due diligence boutique. My strengths lie in commercial, operations, and finance. At the same time, I come from a family with several micro-cap businesses, so I know the perspective of small business owners.
I am currently building nachfolge.live as a solo founder, and the MVP is already complete. At the same time, I am specifically looking for a CTO as a co-founder with whom there is a strong personal fit and who ideally already has experience with data-intensive FinTech solutions and AI. Equally important is a genuine interest in M&A, and Private Markets, as well as a broader passion for financial and capital markets. This is important because nachfolge.live is not intended to become a traditional M&A boutique, but a highly automated FinTech.

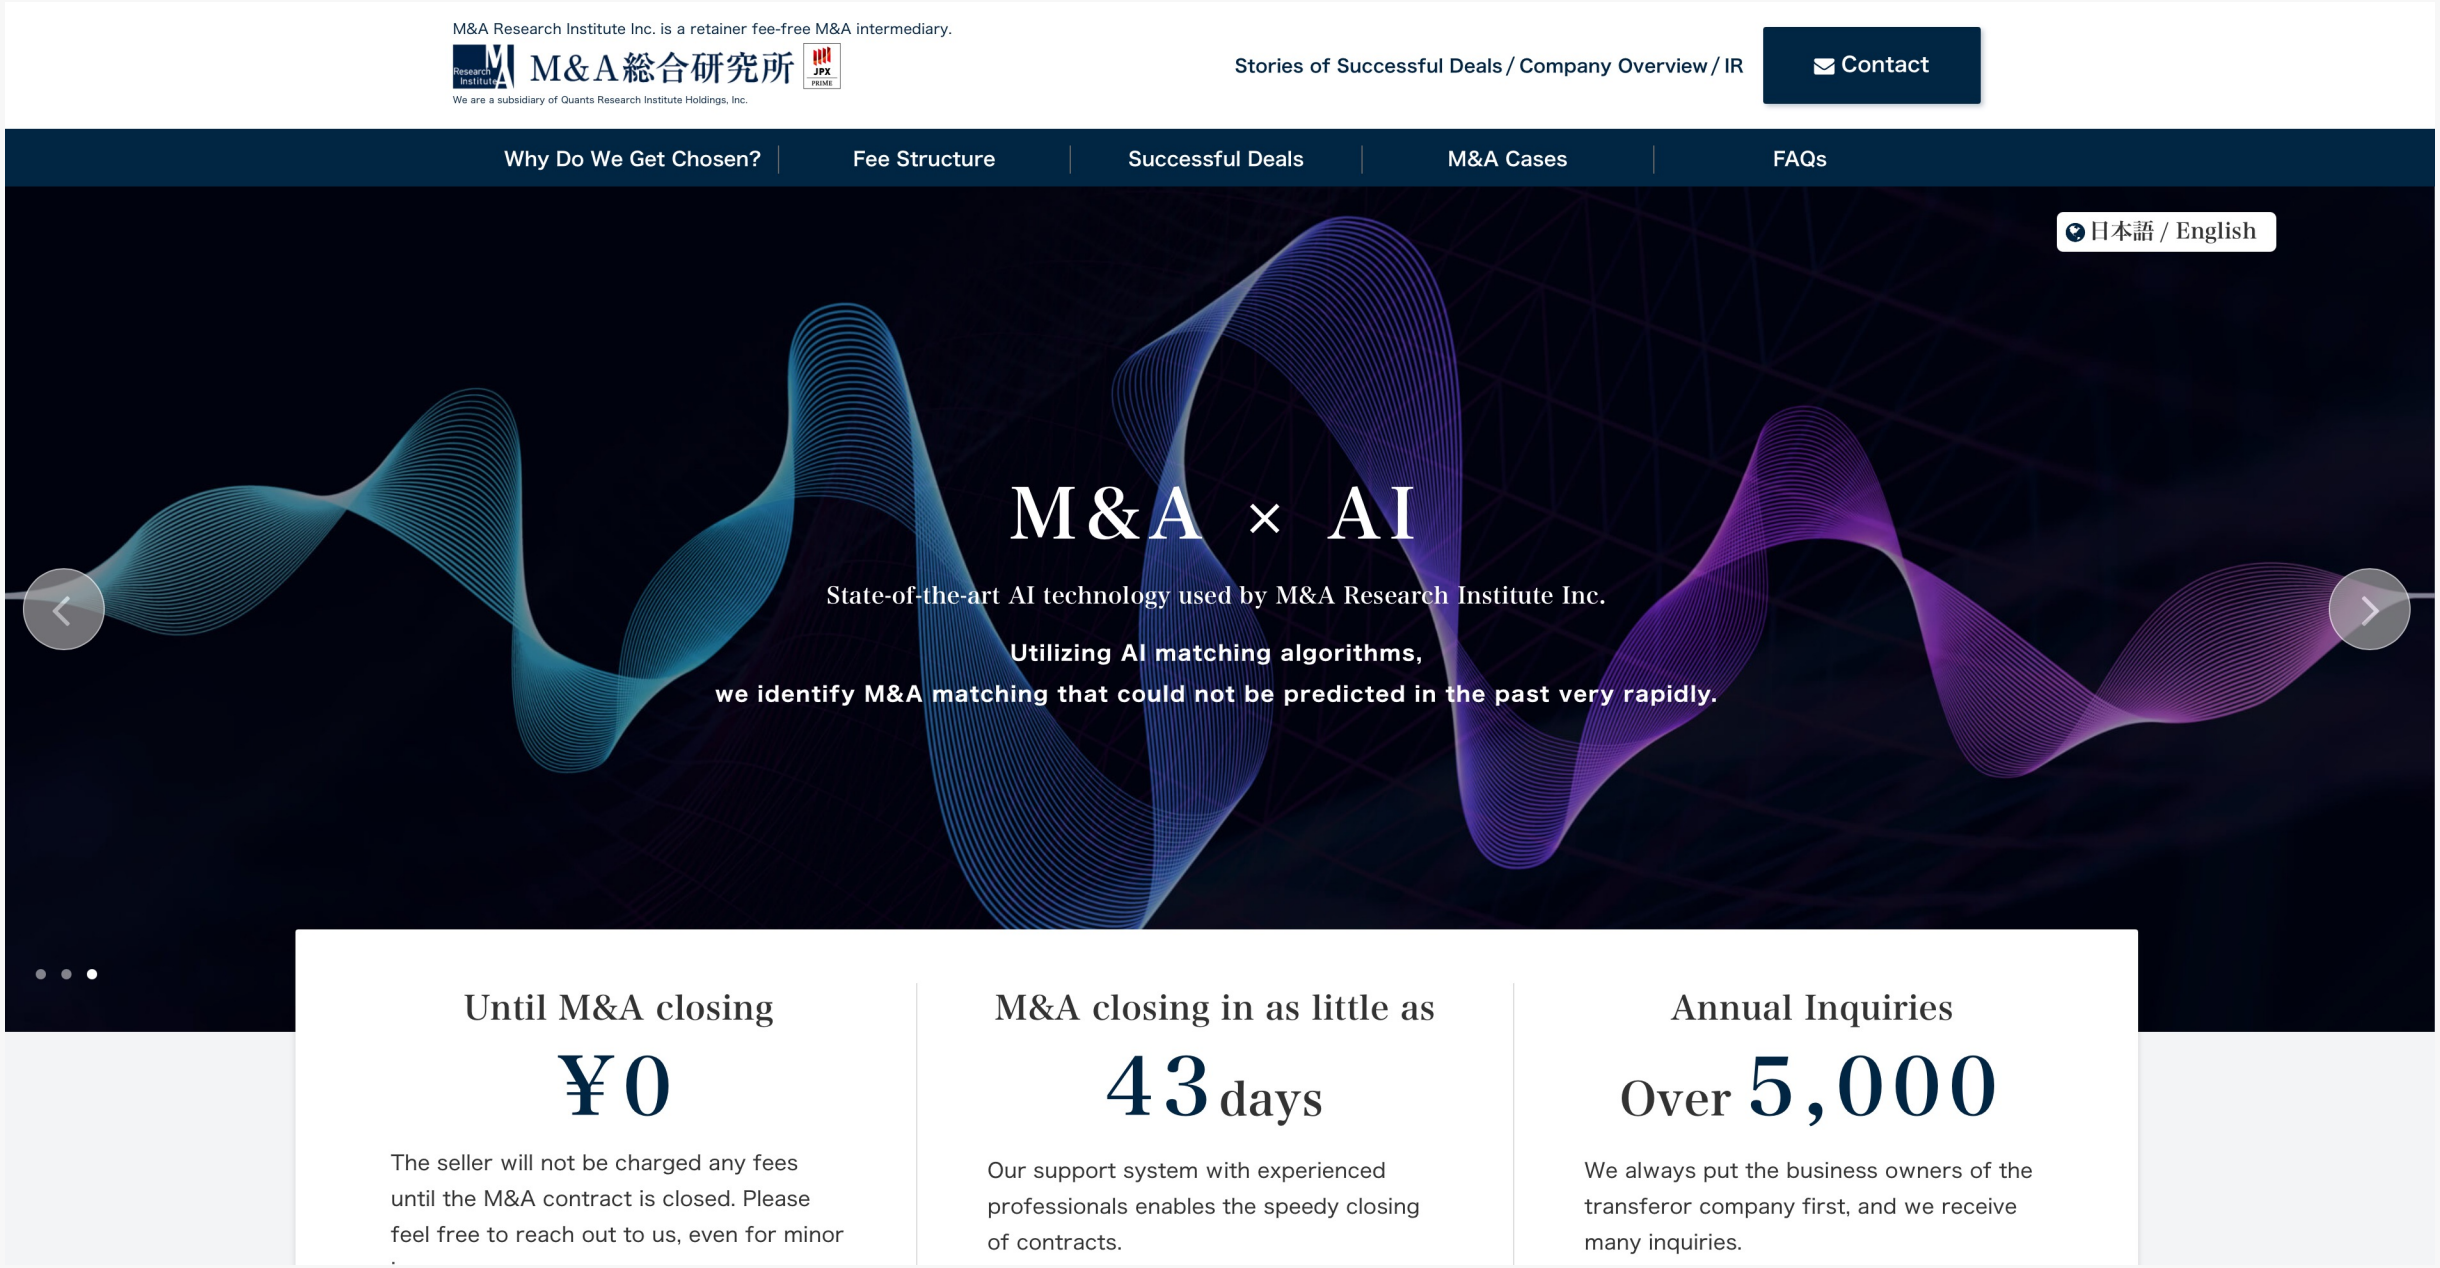

Explain in detail who is your target market and who could be your potential partners?
The primary target market consists of owners of German micro-cap companies (up to 5m EV) who are approaching business succession due to age (sell-side). According to my market analysis and IfM Bonn data, approximately 166,400 micro-cap companies in Germany will face succession by 2030, representing a cumulative transaction volume of up to around €186 billion.
On the buyer side, we primarily address individual succession entrepreneurs, search funds (ETA), and smaller private equity platforms looking for add-on acquisitions. This buy-side develops largely organically as the sell-side offering grows.
Particularly relevant partners are local banks such as Sparkassen and Volksbanken, as well as private capital providers, Search Funds, smaller Private Equity firms, and other investors focused on the German Mittelstand and business succession.

Do you already know your competitors, if yes, what is your competitive advantage over them?
Yes. The market essentially consists of three groups.
The first group consists of passive business marketplaces such as nexxt-change or biz-trade. They primarily provide visibility but do not offer end-to-end transaction execution.
The second group consists of local tax advisors. They are often close to owner-managed businesses, but have only limited local reach and, due to their fragmented structure, can hardly achieve economies of scale. Compared with a fully automated process, their transaction support is therefore relatively expensive, and many do not support transactions at all.
The third group consists of traditional M&A boutiques, which, due to their cost structures, only become relevant in the small-cap segment, starting at around €6 million in enterprise value. As a result, they effectively do not address the actual micro-cap (up to €5m EV) market.
This makes the market for fully integrated micro-cap transaction execution a semi-“blue ocean”, with the few remaining cases being served by highly fragmented local tax advisors.
nachfolge.live’s key competitive advantage lies precisely between these three models: we offer significantly more execution than passive business marketplaces, can operate much more efficiently and with greater reach than local tax advisors through automation and economies of scale, and at the same time address a micro-cap segment that is economically unattractive for traditional M&A boutiques. To achieve this, the majority of execution will be automated through standardized data, CRM workflows, and AI, structurally eliminating the manual bottlenecks of a traditional M&A process.

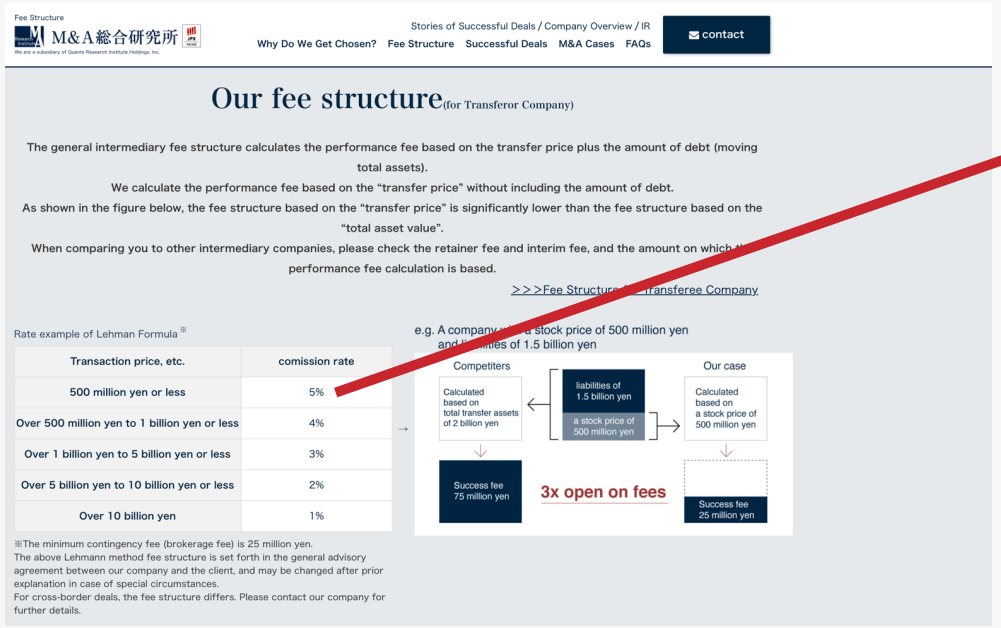

Why do you think it's the right time now for your startup?
Two developments are currently converging for nachfolge.live.
First, the number of upcoming business successions is increasing significantly. According to the analysis, around 166k German micro-cap companies will face succession by 2030. This further expands a market that is already structurally underserved.
Second, AI makes it possible for the first time to automate key parts of an M&A process economically. Tasks such as preparing an investment memorandum, structuring information, valuation, matching, and process guidance no longer need to be carried out entirely manually by a large deal team.
This combination is exactly what matters: the so called Silver Tsunami is massively increasing the need for business succession advisory, while AI is simultaneously creating the technological foundation for the first time to process micro-cap M&A at scale.

What is your grand vision, where do you see your startup in 5 years from now?
The vision is to make nachfolge.live the central, fully automated transaction infrastructure for business succession in the micro-cap segment across the DACH region.
In five years, every micro-cap business owner should have access to a professionally structured M&A process.
Through the extensive automation of execution, a small team should eventually be able to manage hundreds of transactions in parallel.
The goal is therefore not to build another M&A boutique or business marketplace, but the first fully automated end-to-end platform for business succession in the DACH micro-cap segment.

Our fee structure (for Transferor Company)

The general intermediary fee structure calculates the performance fee based on the transfer price plus the amount of debt (moving total assets).

We calculate the performance fee based on the "transfer price" without including the amount of debt.

As shown in the figure below, the fee structure based on the "transfer price" is significantly lower than the fee structure based on the "total asset value".

When comparing you to other intermediary companies, please check the retainer fee and interim fee, and the amount on which the performance fee calculation is based.

>>>Fee Structure for Transferee Company

Rate example of Lehman Formula※

Transaction price, etc.	comission rate
500 million yen or less	5%
Over 500 million yen to 1 billion yen or less	4%
Over 1 billion yen to 5 billion yen or less	3%
Over 5 billion yen to 10 billion yen or less	2%
Over 10 billion yen	1%

※The minimum contingency fee (brokerage fee) is 25 million yen.
The above Lehmann method fee structure is set forth in the general advisory agreement between our company and the client, and may be changed after prior explanation in case of special circumstances.
For cross-border deals, the fee structure differs. Please contact our company for further details.

e.g. A company with a stock price of 500 million yen and liabilities of 1.5 billion yen

	¥	€
FX-Rate (07/2026)	0.0054	1

¥EV	¥EV	€EV	Marginal Fee	¥Lehman Fee	€Lehman Fee
¥500m	¥500,000,000	€2,700,000	5%	¥25,000,000	€135k
¥1b	¥1,000,000,000	€5,400,000	4%	¥45,000,000	€243k
¥5b	¥5,000,000,000	€27,000,000	3%	¥165,000,000	€891k
¥10b	¥10,000,000,000	€54,000,000	2%	¥265,000,000	€1,431k
¥15b	¥15,000,000,000	€81,000,000	1%	¥315,000,000	€1,701k

The first ¥500m is always charged at 5%.
The next ¥500m is charged at 4%.
The next ¥4b is charged at 3%, then the next ¥5b at 2%.
Only the amount above ¥10b is charged at 1%.
Minimum fee ¥25m.
